

What if...

- ! what we've accepted on faith isn't true?
- ! the science doesn't support mass vaccination?
- ! the medical community is not in unanimous agreement about the safety, effectiveness and need for vaccinations?
- ! the efforts to impose mandatory vaccination are motivated by interests other than improved health?
- ! the growing epidemic of chronic illness, immune and neurological injury, and sudden death are a result of the massive increase in the number of vaccines we are subjected to?
- ! vaccinated children have more chronic conditions than unvaccinated?

"At Vaccine Choice Canada we think it is important that we push beyond using 'belief' as the basis for the vaccine decision, and instead decide from a place of information based on quality scientific evidence."

Edda West, Co-founder
Vaccine Choice Canada

The MOST IMPORTANT DECISION

The decision of whether or not to vaccinate is the most important decision you will make as an individual and as a parent.

- ☐ Are you prepared?
- ☐ Do you have enough information to give informed consent?
- ☐ Do you have solid, verifiable evidence to support your decision?

You should because

vaccination is one decision that cannot be undone.

If you want to learn more and exercise truly informed consent, please visit these resources:

It's TIME to QUESTION ALL VACCINES

COVID-19 has challenged some of the fundamentals of Canadian society. One of the consequences of the last three years is that more Canadians are actively questioning their assumptions about our government, public health and the mainstream media.

One area of questioning that has emerged is whether we have been told the truth about vaccination.

Most Canadians have never questioned, much less secured information to discern the claim that vaccines are safe, effective and necessary.

They've accepted this position on faith.

Informed Consent

At **Vaccine Choice Canada**, we welcome the growing desire to examine this important matter. The fundamental basis of an ethical medical system is informed consent. Informed consent is a process in which patients are given essential information prior to partaking in a medical procedure or treatment.

According to the Canadian Medical Protective Association¹ for consent to serve as a defence against allegations of either negligence or assault and battery, the consent must have been **voluntary**, meaning, free of coercion or any threats of reprisal. Also, the patient must have the **capacity to consent**, and the patient must have been **properly informed** on the **purported benefits, significant risks** and **alternative treatment options**.

Many Canadians are discovering that there is much about the vaccine industry we didn't know or were never told. For example:

- ⚠️ Vaccines do not undergo the same level of safety testing as is required for all other pharmaceutical products.
- ⚠️ COVID vaccine manufacturers have been granted legal immunity such that they are not liable for injury or death caused by their products.
- ⚠️ Vaccine producers have paid billions in criminal penalties and settlements for research fraud, faking drug safety studies, failing to report safety problems, bribery, kickbacks and false advertising.
- ⚠️ The US National Vaccine Injury Compensation Program has paid more than \$4.4 billion in compensation to vaccine-injured individuals.

It's Not Too Late

As more and more Canadians reflect upon their experience with, not only the COVID-19 vaccine, but with all vaccines, a near universal response is that those partaking in vaccination were never properly educated to allow them to provide truly informed consent. It's not too late to start asking questions such as:

- ❓ What does the science say about the purported benefits of vaccination vs naturally acquired immunity?
- ❓ Are the claims of safety valid?
- ❓ Are vaccines necessary to maintain good health?
- ❓ Are vaccinated children healthier than unvaccinated children?
- ❓ If not vaccines, what are the alternatives?
